The queen of triodes is named GM-70 radio amateurs for high power and linearity characteristics, as well as beauty of appearance.. The sound is very powerful and slightly rectilinear Minor nuances of the musical work are somewhat suppressed by this power and pressure, and I would like a more delicate sound.. In amplifying blocks, there are only a few nonpolar capacitors of a small capacity for supplying the input and driver cascades.

The lamp was often used in radio transmitters of the short-wave range of amplitude modulation to control the level of the output signal by changing the voltage at the anode of the output generator lamp.. The advantages of the lamp are low internal resistance, high output power, linear volt-ampere characteristics.
