add-in that will: create a new Windows Forms project make it run (launch it) I have little experience writing Eclipse extensions
and I was wondering if anyone could offer any pointers or suggestions. A: All you need to do is create an extension-point with
the id org.eclipse.ui.examples.starter.core.feature.category (or org.eclipse.ui.examples.starter.simple), and put a feature.xml in
the "bin-directory" of your add-in project, containing the following content: Eclipse Ui Examples Strer Copyright Your Name
This program is distributed under the terms of the Eclipse Public License version 1.0

Electroporation is a physical method of gene delivery that has been combined with the analysis of gene activity in tumors to identify the most effective therapeutic genes to enhance systemic delivery. However, information on the effectiveness of electroporation in killing cancer cells is lacking. The aim of this study was to determine the ability of electroporation to enhance the effectiveness of gene therapy against tumor cells. We show that pulsed electric fields (PEF) can enhance the bystander killing of tumor cells by tumor necrosis factor-related apoptosis-inducing ligand (TRAIL) gene transfected cells. Bystander killing was demonstrated in a model involving human leukemia (HL60) cells, which were electroporated to induce higher levels of protein expression. Killing was also shown to be mediated by TRAIL gene expression. Also, we found that myeloid leukemia (K562 and U937) and non-Hodgkin's lymphoma (Namalwa) tumor cells are susceptible to killing by bystander effect and TRAIL gene transfection by electroporation. We also found that the bystander killing of tumor cells is mediated by the TRAIL induced by PEF. In addition, the enhancement of TRAIL-induced killing of cells was shown to be related to an increase in reactive oxygen species and caspase activation. These results show that PEF can enhance the ability of TRAIL to kill tumor cells, presumably by induction of apoptosis. These results can be utilized to improve on gene therapy approaches by enhancing tumor cell death.Q: Powershell: Displaying names in a list with delimited folders I'm trying to get a basic output like this that will populate the names of folders in a list: Folder - Folder -- F --- F1 -- F2 --- F2 But f678ea9f9e
